

Lido Grocery Store

Bootstrap implementation summary | Author: Shalkar Saparali | Scope: Contacts and About this site

The existing Contacts and About this site pages were adapted to Bootstrap 5.3.8. The shop details, hours, photograph, review, links and main sections were retained. Bootstrap now controls the layout, navigation, buttons and responsive behaviour.

Repository and submitted work

GitHub: github.com/Temirlan222/WEB

Code version: bf63206 - Contacts and About implementation

Supporting materials: Grocery / ShalkarSaparali

What changed

Layout. Responsive columns organise the contact details, photograph, opening hours, review, payment information and About sections. The address and photograph use a nested row.

Navigation. The original six-page menu collapses to a working toggle button on narrow screens. Only Bootstrap's bundle is used; no custom JavaScript was added.

Text and controls. Bootstrap typography, spacing, alignment, borders and button classes replace manual presentation rules. Call and Map are real links; Email is disabled because no verified address is available.

Component. A Bootstrap Alert highlights the existing note about the unverified shop email. The message remains part of the original contact information.

Custom CSS. The Shalkar stylesheet is now a short colour-only correction layer. Bootstrap supplies the layout and responsive behaviour.

Validation

Both pages were checked at 375, 768 and 1366 CSS pixels. No horizontal overflow was found; the menu opened and closed, the photograph loaded, and local links resolved. The local Nu HTML Checker 26.9.27 reported **zero errors and zero warnings** for both pages.

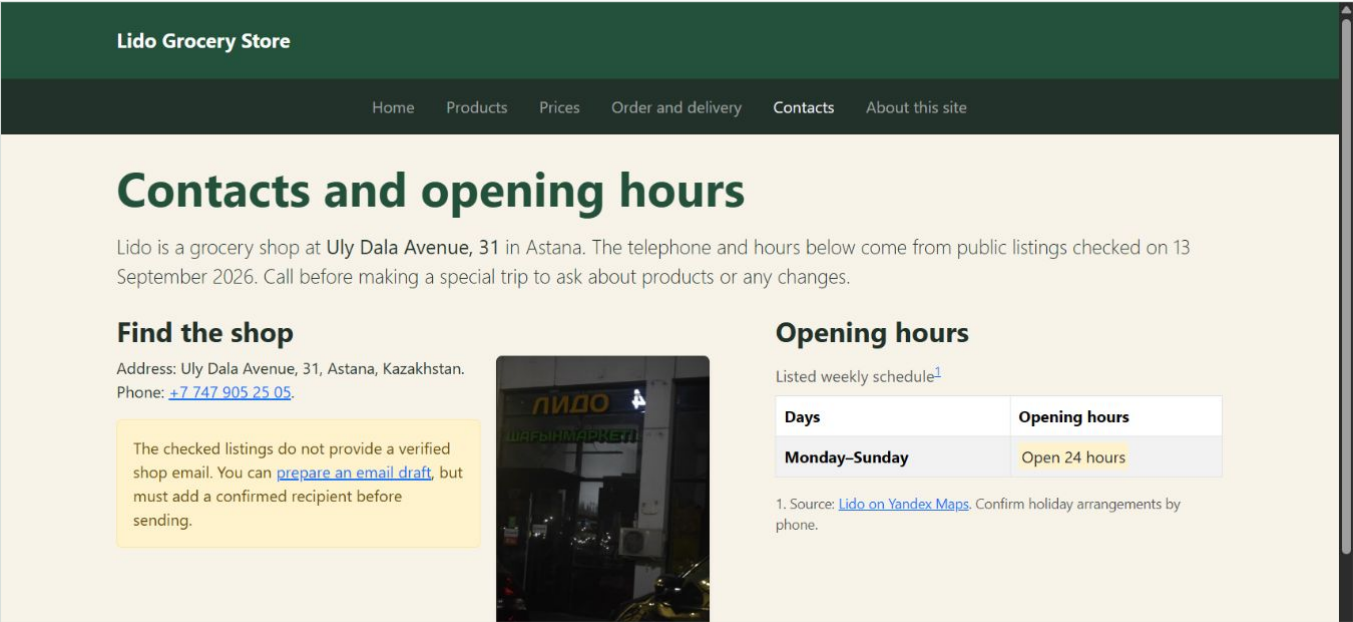

The assignment requests the repository and four screenshots rather than a written report. This PDF is a compact overview; the original screenshots, README and CSS replacement list are in the repository.

Desktop and tablet

Contacts page | Screenshots show the top of each viewport; original-resolution files are in the repository.

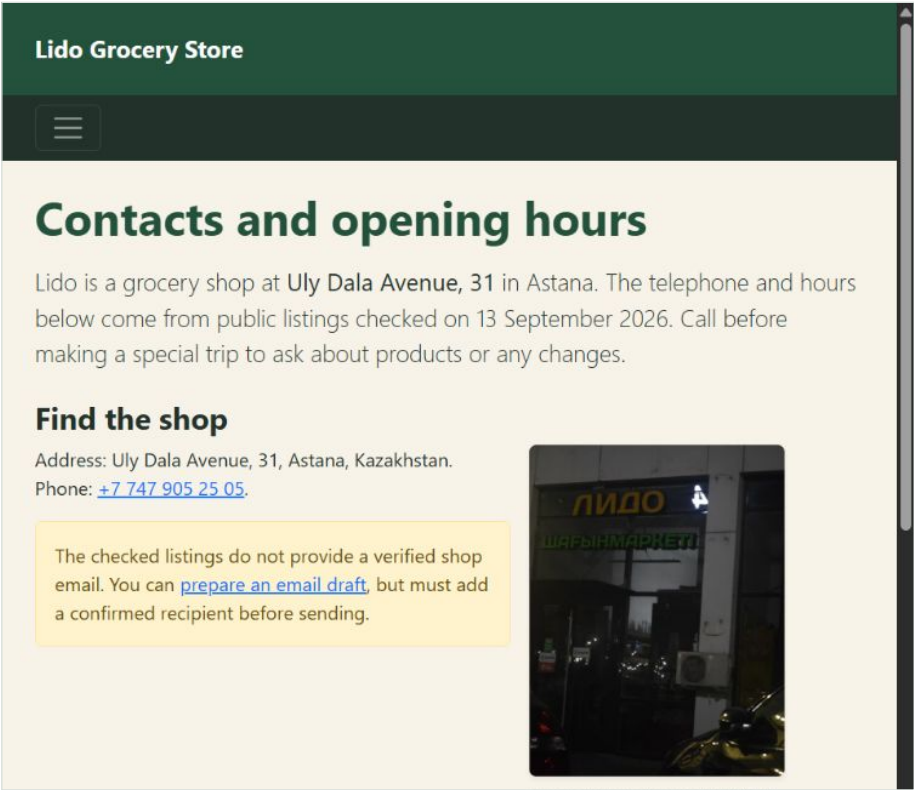

Desktop - 1366 CSS pixels

Contact details and opening hours sit side by side. The navigation is fully expanded.

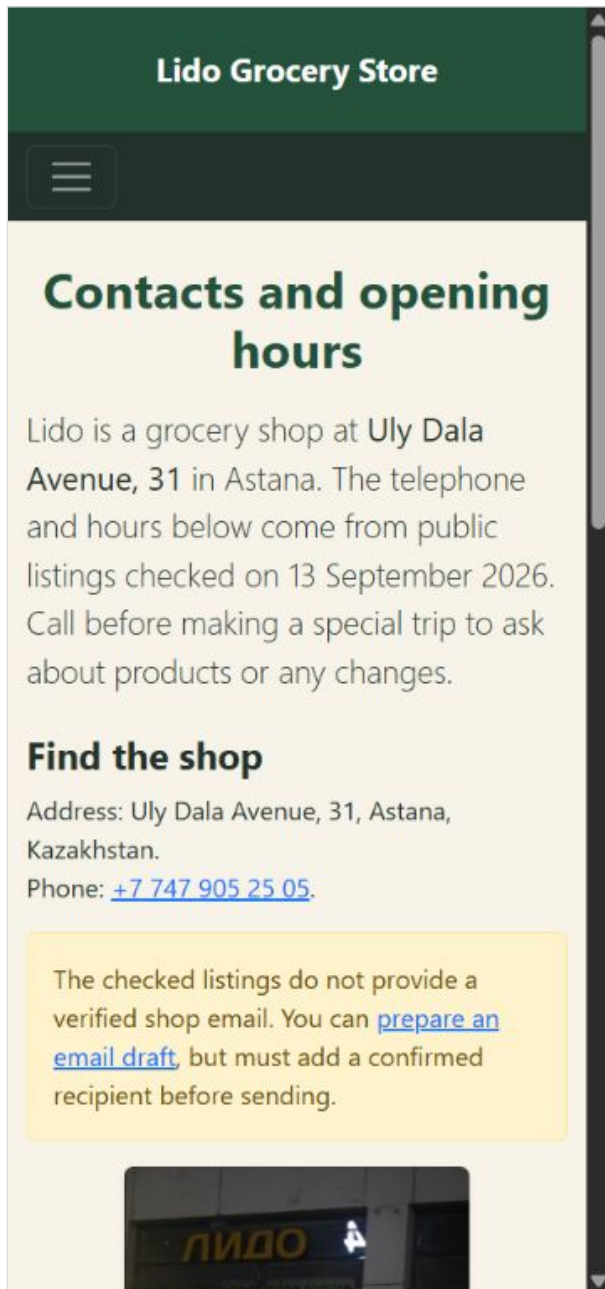

Tablet - 768 CSS pixels

The main sections stack, while address and photograph remain in two columns. The menu uses the toggle button.

Phone and navigation

Contacts page | 375 CSS pixels | Content stacks without horizontal scrolling.

Phone layout

The photograph, hours and other sections stack in one column. Text stays inside the viewport.

Collapsed navigation

The toggle button is visible and the links are initially hidden. Opening and closing were tested on both pages.

All four original screenshots are in the repository: phone, tablet, desktop and the collapsed phone menu.
